WHAT IS CLAIMED IS:

- 1. An endonuclease enzyme which is secreted from immune cell and recognizes bacterial DNA as foreign agent and processes it to produce about 10 bp single-stranded oligonucleotide including CpG motif which is involved in immune response.
- 2. The endonuclease enzyme according to claim 1 wherein immune cell includes human B lymphoblastic find cell line or 12-O-tetradecanoylphorbol 13-acetate-treated U937 cell line

5

3. The endonuclease enzyme according to claims 1 or 2 which has molecular weight of 72.4 kD by SDS-PAGE.

15

- 4. The endonuclease enzyme according to claims 1 or 2 which shows Mg²⁺-dependent enzyme activity.
- 5. The endonuclease enzyme according to claims 1 or 2 which has optimal pH of 6.6 to 7.6.
- 6. The endonuclease enzyme according to claims 1 or 2 which the mobility distance of the enzyme activity by native-PAGE is apparently distinct from that of Dnase I.
- 7. A process for producing endonuclease of claim 1 which comprises culturing human B-lymphoblastic IM9 cell line or TPA-treated myelogeneous U937 cell line on an appropriate medium to produce the said endonuclease and isolating the said endonuclease from the cell lysate or the culture medium.
 - 8. An immune adjuvant comprising about 10 bp single-stranded oligonucleotide having CpG motif produced by treatment of bacterial DNA by endonuclease of claim
